

eWork ver. 1.110 Release Notes

1. Removal of group and coordination option types for Packages. All packages created will no longer have a type.
2. Auto-population of Maintenance Area, IRZ, Yard, and Council District based upon intersection location entered into Work Order. Please note, the auto-populated information will correlate to the initial intersection even on multiple block locations. The Maintenance Area and Council District may be modified after auto-population if necessary.
3. Additional status summary information is now displayed on the upper right hand corner of a Work Order's Details page.
